### DESKTOP AIR PURIFIER AND IONIZER

Mini desktop air purifier that can be used in a room or a small office.

### IONIZATION - ELIMINATION OF ALLERGENS

Ionization of air consists in the production of negative ions, whose task is to neutralize the action of positive ions, which are produced, among others, by electronic devices. Positive ions attract dust, bacteria, viruses, mites, as well as mold and fungal spores. Thanks to air ionization, we protect against the penetration of these pollutants into our bodies and prevent allergy to dust and mite allergy.
