

## The first connected and heated insoles

The Warm Series are the first connected heated insoles, which are designed to keep your feet warm. This innovative product has been designed for your comfort and health. Available on Android and iOS, the dedicated application allows you to regulate the temperature in your shoes and track your daily physical activity with a simple click. Never get cold feet again!

QR code pairing and insoles authentication

## A dedicated application that analyzes your activity

Our new application is available on iOS (above 9.0) and Android (above 5.0) and allows you to connect to your heated insoles using the Bluetooth (BLE) connectivity of your phone. Through the app, you can set the temperature of each insole separately and quantify your daily activity: with the built-in sensors, you can keep a precise count of your daily steps, distance and burned calories.

## Integrated smart thermostat - for intelligent heating

Connect your heated insoles to your phone, choose the desired comfort temperature and enjoy your daily activities during the cold season. The insoles can accompany you on your bike or motorcycle rides, hunting, hiking... and will improve your well-being every day. They are also suitable for workers working in a cold environment:

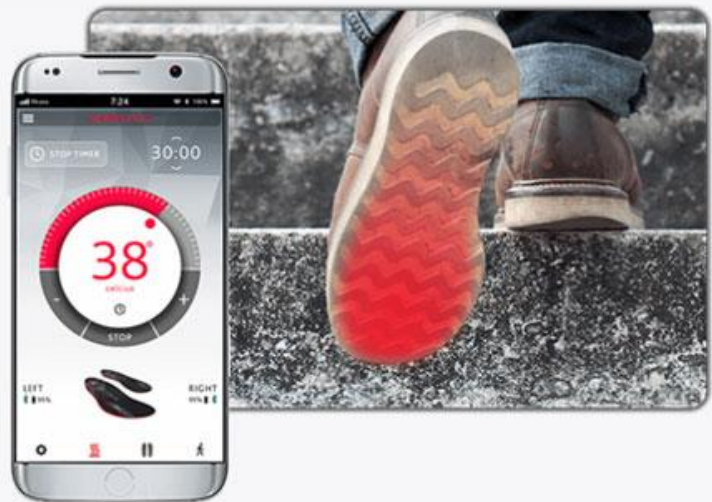

construction, warehouse and security.

The dedicated application allows you to control the temperature inside your shoe to the degree, between 20°C and 45°C / 68°F and 113°F.

## Monitoring your daily activity

The heated insoles Warm Series will become your personal coach on a daily basis, providing you with information about your physical activity in real-time. The integrated tracker will allow you to record the number of walking steps, the distance covered and the number of calories burned.

## Heated insoles designed for the comfort of your feet

### Ultra light & Comfortable

Ultra light and comfortable, the Warm Series has been designed for the comfort of your feet.

### Easy to adjust

A pair includes two sizes. Just follow the cut marks to adapt them to your shoes.

### 100% Safe battery

We have integrated a 100% secured battery to avoid any accident.

## Most safest and advantage battery

LCB (Lithium ceramic battery)

This battery is 100% safe and continues to work even if you cut it with scissors and its efficiency is over 95% even at -15 degree C.

## Connected heated insoles with unique features

The Warm Series insoles have been designed to offer your feet the best: more comfort, support, shock absorption and hygiene. They will perfectly follow the foot shape, which maximizes your performance.
